

Preventing the unknown and catching the known

Achieve proactive security with Thor Enterprise

All businesses today depend on 3rd-party software to perform their work optimally.

However, few are aware that 85% of malware today uses outdated 3rd-party software to compromise the company's network and endpoints. Thor Enterprise includes Thor X-ploit Resilience which automatically patches security-critical 3rd-party software on all your servers and endpoints, even when your users are on the go

Take the right steps to be a secure and compliant company

For most IT administrators, it is a hard task to locate the specific users that pose the biggest risk on a daily basis.

Utilizing Thor Enterprise Darklayer Guard's unique endpoint traffic-scanning solution, it is possible to map out the critical endpoints in your environment to properly educate and mitigate the risk of getting compromised.

Thor
FORESIGHT

Thor
VIGILANCE

Thor
2ND GENERATION
PROTECTION

Proactive protections against

- ✓ Ransomware
- ✓ Banking Trojans
- ✓ Software vulnerabilities
- ✓ Data Leaks
- ✓ Advanced Exploit kits
- ✓ Zero Day malware
- ✓ Virus infections

Thor Foresight is a core part of our protection environment, which with very low support and a timesaver on a daily basis, just means that running IT is simpler and better.

The powerful combination between Thor Foresight and Thor Vigilance will give your endpoints robust proactive protection against unknown malware strains and unique IOCs/IOAs detection for mitigating known malware types as well as hidden code-injected samples.
